

Holdrege Urban Area - COVID-19 Status Report 18 Dec 2020

Background

The Two Rivers Public Health Department (TRPHD) covers 7 counties in central Nebraska, reaching 97,132 people who live and work in the health district spread across roughly 4663 square miles. Over three quarters of residents live in Buffalo and Dawson county, a tenth live in Phelps county, and the remaining 15% is spread somewhat comparably among the four counties of Kearney, Harlan, Franklin and Gosper in decreasing order of population. Well over half the residents of TRPHD live in the three largest cities - Holdrege (pop. 5408), Lexington (pop. 10115) and Kearney (pop. 33867), over a third live in Kearney city alone.

To better understand COVID transmission in TRPHD ¹, we decided to analyze case numbers in Kearney, Lexington and Holdrege urban areas, defined as the city and surrounding smaller towns

- “Kearney area” includes Kearney city, Elm Creek, Pleasanton, Amherst, Riverdale, Gibbon, Shelton and Axtell (39,412 people)
- “Lexington area” includes Lexington, Overton, Johnson Lake and Cozad (15,017 people)
- “Holdrege area” includes Holdrege, Loomis and Funk (5967 people).

In the tenth edition of this document, we will

- a) Look at the overall course of the COVID-19 pandemic in TRPHD from **April - December** (36 weeks) and identify outbreaks in each of the three urban areas.
- b) Analyze daily case averages (7-day rolling) in **Lexington, Holdrege and Kearney** cities from **April 1 - December 15**.
- c) Plot total (cumulative) COVID-19 cases in **Lexington, Holdrege, Kearney, Gothenburg and Minden** cities from **April - December**, displaying total cases by 10,000 population in each city ²
- d) Describe 7-day rolling average of cases in **Holdrege** area by age and city of residence from **July 01 - December 15**.
- e) Describe the 7-day rolling average of COVID-19 cases from **Nov 17 - Dec 15** (4 weeks) across cities in Two Rivers Health District. Present the same case counts/10,000 persons.
- f) Present a brief weekly overview and analysis for **Holdrege urban area**.

To conclude, daily rates of COVID-19 have decreased over the past week in Holdrege city and Holdrege urban area. Although cumulative case counts continue to rise in Holdrege area, the rate of increase has slowed appreciably in the last three weeks. Daily case rates have dropped across all cities in the Two Rivers Health District, including Holdrege. Persons aged 60 years and over account for almost half of all new cases in the Holdrege area. There is improved ICU availability and lower COVID-related medical/surgical bed usage across hospitals in TRPHD this week compared to the previous 4 weeks. Residents are advised to continue to adhere to strict preventive measures (social distancing, correct and consistent masking, hand sanitizing) at all times to protect themselves and others

¹ For complete explanation of definitions and data sources, please see appendix 1

² For complete explanation of definitions and data sources, please see appendix 2

- The graph below describes daily COVID-19 cases in TRPHD from **April 1 - December 15** broken down by **urban area** (Holdrege, Lexington, Kearney and all others). The height of the graph corresponds to the daily case count and the thickness of each colored band corresponds to the urban area.
- The second graph below describes daily cases (7-day rolling average) in **Lexington, Holdrege and Kearney cities** from **April 1- December 15**

7 Day Rolling Average of COVID-19 Cases by area

Graph displays data from April 1st to December 15th

Information Updated as of 12/15 at 8 p.m.

7-Day Rolling Average of COVID-19 cases: Kearney, Lexington, Holdrege cities (1 Apr - 15 Dec)

- The graph below describes the total (cumulative) cases/10,000 persons in **Lexington, Kearney, Holdrege, Gothenburg and Minden** cities from **April 1- December 15**. The graph attempts to estimate what proportion of each city would have tested positive by December 15 were its population equal to 10,000 (about the size of Lexington). The graph presents the same proportions for the entire Two Rivers Health District for reference.

- The graph below shows COVID-19 cases in **Holdrege** area from **July 1 – December 15**, describing positive cases by city. The height of the graph corresponds to the daily case count and the thickness of each colored band corresponds to a city's contribution.
- The second graph describes cases by age during the same period in the **Holdrege** area.

7 Day Rolling Average of COVID-19 Cases by City

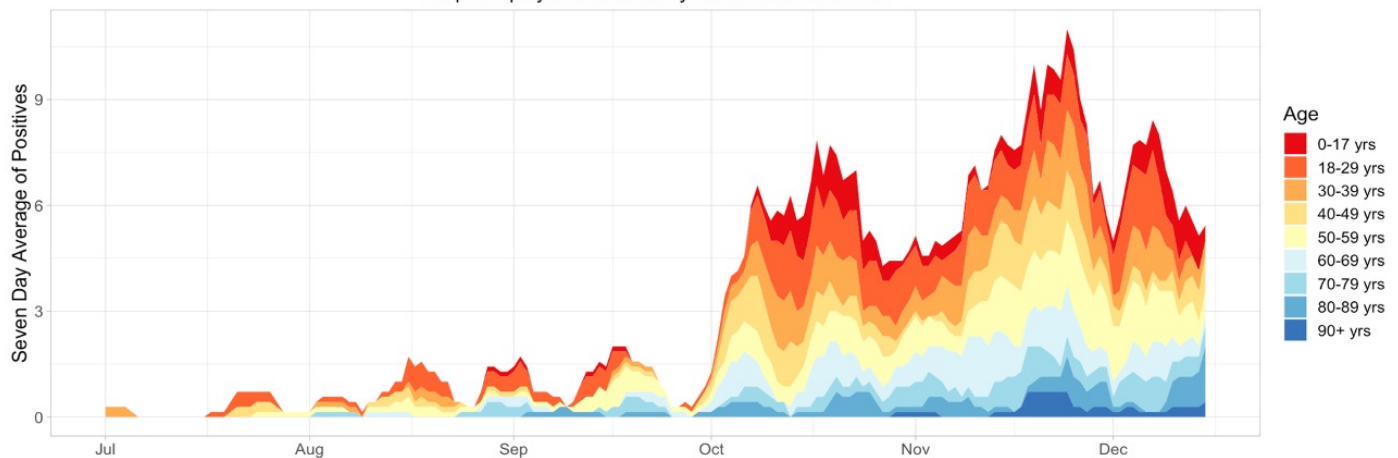

Graph displays data from July 1st to December 15th

Information Updated as of 12/15 at 8 p.m.

7 Day Rolling Average of COVID-19 Cases by Age in Holdrege Area

Graph displays data from July 1st to December 15th

(Holdrege area includes Holdrege, Loomis, and Funk)

- The graph below shows COVID-19 cases across 9 cities in TRPHD with population greater than 1100 from **Nov 17 - Dec 15**. The height of the bar corresponds to the daily case count and the thickness of each colored band corresponds to a city's contribution.
- The second graph describes cases per 10,000 residents in cities with population >1100 during this time period. ³ **Holdrege city** is represented by the light blue line

7 Day Rolling Average of COVID-19 Cases in Cities > 1,100 Residents

Graph displays data from November 17th to December 15th

Information Updated as of 12/15 at 8 p.m.

7 Day Rolling Average of COVID-19 Cases Per 10,000 Residents in Cities > 1,100 Residents

Graph displays data from November 17th to December 15th

Information Updated as of 12/15 at 8 p.m.

³ Note: We have used 10,000 residents as reference population to better compare cities across the district.

Weekly Summary Report

Viewing the graphs from **April – December**, some broad trends are noticeable:

- Daily case counts of COVID-19 in Holdrege city and urban area have dropped over the past 7 days after rising the previous week.
- After briefly rising last week, the daily average of new cases has dropped by over 60% across TRPHD, compared to 4 weeks previously.
- Although cumulative case counts are rising, they seem to be doing so at slower rates across the biggest cities in TRPHD, including Holdrege. As of December 15, one out of every 12 residents of Holdrege had tested positive for COVID-19.

On analyzing COVID cases from **July – December**, some details become clear:

- Holdrege and Funk account for a majority of cases in the Lexington area this week. Case counts have, however, dropped across all cities
- The contribution of persons aged 60 years and over to overall positive case counts has increased, seniors aged 60 or more account for about a half of new cases in Holdrege area.

On analyzing cases from **November – December**, we are able to observe:

- All cities with 1100 or more residents reported dropping case numbers over the past week. Holdrege's case rates have fluctuated over the past month, but seem to be decreasing for now.

In addition, an analysis of **healthcare capacity** in Two Rivers Health District reveals:

- COVID-19 related ICU occupancy has decreased drastically in the past month. Over 45% of ICU beds are now available, the first time in 6 weeks. COVID-related hospitalizations have also dropped across TRPHD. (see <https://www.trphd.org/covid-19/> for details)

To conclude, daily rates of COVID-19 have decreased over the past week in Holdrege city and Holdrege urban area. Although cumulative case counts continue to rise in Holdrege area, the rate of increase has slowed appreciably in the last three weeks. Daily case rates have dropped across all cities in the Two Rivers Health District, including Holdrege. Persons aged 60 years and over account for almost half of all new cases in the Holdrege area. There is improved ICU availability and lower COVID-related medical/surgical bed usage across hospitals in TRPHD this week compared to the previous 4 weeks. Residents are advised to continue to adhere to strict preventive measures (social distancing, correct and consistent masking, hand sanitizing) at all times to protect themselves and others

APPENDIX 1

Methods & Definitions

To better understand the course of the COVID-19 pandemic in Kearney, Lexington and Holdrege, we created ‘urban areas’ that included both the city and its surrounding towns. We included all towns within 20 miles of Kearney city, 15 miles of Lexington and 10 miles of Holdrege within each city’s urban area. The respective populations of all 7 counties in TRPHD are shown below. Kearney city accounts for over third of the population of TRPHD.

County	Population
Buffalo	49,659
Dawson	23,595
Franklin	2,979
Gosper	1,990
Harlan	3,380
Kearney	6,495
Phelps	9,034
TRPHD total	97,132
Nebraska state	1,934,408

Thus “Kearney area” includes Kearney city as well as Elm Creek, Pleasanton, Amherst, Riverdale, Odessa, Gibbon, Shelton and Axtell.

“Lexington area” includes Lexington city as well as Overton, Johnson Lake and Cozad.

“Holdrege area” includes Holdrege city, Loomis and Funk.

The populations of cities and villages included is described below.

CITY	POPULATION
Kearney	33867
Elm Creek	949
Axtell	751
Pleasanton	359
Riverdale	179
Amherst	253
Gibbon	1869
Shelton	1055
Odessa	130
KEARNEY URBAN AREA (TOTAL)	39412
Lexington	10115
Overton	567

Johnson Lake	600
Cozad	3735
LEXINGTON URBAN AREA (TOTAL)	15017
Holdrege	5408
Funk	183
Loomis	376
HOLDREGE URBAN AREA (TOTAL)	5967

For presenting data, we selected 3 time frames:

- a) April 1 - Dec 8 (From the beginning of the pandemic to current)
- b) July 01 - Dec 8 (From the beginning of second sustained 'wave' in daily case counts to current)
- c) Nov 10 - Dec 8 (Previous 4 weeks)
 - Data is presented as 7-day rolling averages for daily numbers and absolute counts for cumulative cases. The 7-day rolling average is the sum of all cases reported on that day plus the previous six divided by 7.
 - Cumulative cases refer to all cases that have been confirmed in the district since the beginning of the pandemic in TRPHD (March 19)
 - Average positivity rate refers to a seven-day rolling average positivity rate, which is the sum of all cases for that day and the previous six divided by the sum of all tests done in that day and the previous six
 - In cases that call for comparison across larger areas (counties v/s state of Nebraska, for eg), we present the count per 100,000 population. 100,000 roughly corresponds to the population of Two Rivers Health District (97,132)
 - In cases that call for comparison between cities, (Kearney v/s Minden for eg), we present a count per 10,000 population. 10,000 roughly corresponds to the population of Lexington (10,115), the second largest city in TRPHD.
 - For calculation, we use the 2019 mid- year estimate (American Community Survey, ACS) and data from The Atlantic's COVID tracking project (<https://covidtracking.com/data>)

APPENDIX 2

Cases per 10,000 population

Daily case counts are the **7-day rolling average** of cases expressed as a fraction of the population of the area, and standardized to 10,000 persons.

The total/ cumulative case counts are the **total** cases counted in an area (county, city, urban region or health district) from the first recorded case in the area (in case of TRPHD this is March 19, 2020). This is expressed as a fraction of the total population of the area and standardized to 10,000 persons.

10,000 is used while describing cities in Two Rivers District as it offers a rough mean value that is comparable across the populations of Holdrege (pop. 5408), Lexington (pop. 10115) and Kearney (pop. 33867).

Population numbers used are from the American Community Survey (ACS 2019 mid-year estimates). For further detail, see: <https://www.census.gov/programs-surveys/acs/data.html>

7-Day rolling average/ 10,000 persons is calculated as:

$[(\text{Sum of case counts for the most immediate 7 days}) / 7] / (\text{mid-year population}) * 10,000$

Total cases/ 10,000 persons is calculated as:

$(\text{Total COVID cases}) / (\text{mid-year population}) * 10000$
